

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of subscription to a service in respect of a processing of an input program comprising at least one particular event, said method comprising the steps of, implemented by a service provider:

5 generating an information signal containing an input program comprising at least one particular event, and control information;

transmitting said information signal to each user;

10 offering various subscriptions to a user who is to make a choice of subscription and who is furnished with a device comprising means of selection of the particular event which can be configured on the basis of the chosen subscription and are suitable for providing an output program comprising or not comprising the particular event according to the chosen subscription in dependence  
15 on said control information; and

validating the user's choice of subscription which triggers a step of configuring said means of selection.

2. (Currently Amended) The method of subscription to a service as claimed in claim 1, wherein the ~~input program contains~~ control information includes a table of events, the means of selection being suitable for selecting a particular event on the basis of an  
5 event status value in the table.

3. (Currently Amended) The method of subscription to a service as claimed in claim 1, wherein said device comprises means of accelerated reading of a recorded program; and means of deactivation for deactivating said accelerated reading means during  
5 | the particular event in respect of a specified subscription in  
| dependence on said control information.

4. (Original) The method of subscription to a service as claimed in claim 1, wherein the particular event contains at least one advertisement.

5. (Original) The method of subscription to a service as claimed in claim 1, wherein the choice of the subscription is made by selecting one subscription from among several subscriptions offered on a graphics interface linked to said device.

6. (Original) The method of subscription to a service as claimed in claim 1, wherein said validating step is implemented by the service provider by sending said device a signal characteristic of the chosen subscription, said signal being suitable for  
5 | configuring said means of selection as a function of the chosen subscription.

7. (Currently Amended) A device for receiving an information  
| signal including an input program having at least one particular

event, and control information, said ~~reading an input program~~  
~~comprising at least one particular event, which device comprises~~  
5 ~~comprising means~~ of selection of the particular event which can be  
~~configured~~configurable by a provider of the information signal on  
the basis of a subscription chosen by a user ~~and which are~~  
~~suitable, said selection means for providing an output program~~  
comprising or not comprising the particular event according to the  
10 subscription chosen by the user in dependence on the control  
information.

8. (Currently Amended) A device for receiving an information  
signal including an input program having at least one particular  
~~event, and control information, said recording an input program~~  
~~comprising at least one particular event, which device comprises~~  
5 ~~comprising means~~ of selection of the particular event which can be  
~~configured~~configurable by a provider of the information signal on  
the basis of a subscription chosen by a user ~~and which are suitable~~  
~~for, said selection means~~ storing on a medium an output program  
comprising or not comprising the particular event according to the  
10 subscription chosen by the user in dependence on the control  
information.
